A measurement question

When do campaigns take off or fall flat?

A measurement question

When do campaigns take off or fall flat?

When do campaign contributions take off or fall flat?

Changepoint models detect changepoints

The challenges

Modeling daily contribution counts

The challenges

Modeling daily contribution counts

Choosing the number of changepoints

Overdispersion in campaign contributions

The model

$$y_t \sim \text{Poisson}(\eta_t \lambda_t) \quad (\text{data})$$

The model

$$y_t \sim \text{Poisson}(\eta_t \lambda_t) \quad (\text{data})$$

$$s_t = k \quad (\text{regime})$$

The model

$$y_t \sim \text{Poisson}(\eta_t \lambda_t) \quad (\text{data})$$

$$s_t = k \quad (\text{regime})$$

$$\lambda_t = \exp(X_t \beta_k)$$

The model

$$y_t \sim \text{Poisson}(\eta_t \lambda_t) \quad (\text{data})$$

$$s_t = k \quad (\text{regime})$$

$$\lambda_t = \exp(X_t \beta_k)$$

$$\eta_t \sim \text{Gamma}(\rho_k, \rho_k)$$

The model

$$y_t \sim \text{Poisson}(\eta_t \lambda_t) \quad (\text{data})$$

$$s_t = k \quad (\text{regime})$$

$$\lambda_t = \exp(X_t \beta_k)$$

$$\eta_t \sim \text{Gamma}(\rho_k, \rho_k)$$

Use a Bayesian nonparametric prior to estimate the number of regimes.

The path forward.

The path forward.

- Run on all (digitized) Congressional races to find more systematic variation.

The path forward.

1. Run on all (digitized) Congressional races to find more systematic variation.
2. Collect fundraising event data and compare with change-points.

The path forward.

1. Run on all (digitized) Congressional races to find more systematic variation.
2. Collect fundraising event data and compare with change-points.
3. Generalize the Bayesian nonparametric approach beyond count data.
